

TITLE of the INVENTION

"Method of offering a service provided by a server computer in a communication network"

TEXT of the ABSTRACT

A method of offering a service provided by a server computer in a communication network comprises a step (E11) of sending a service description document comprising a description of a functionality implemented during a preprocessing or post-processing of data in XML format of a message exchanged during the execution of the service on the communication network.

Use for specifying the various processings applied to data in XML format.

(see Figure 1)
